TYPO3.Fluid - Feature # 33494

Status:	Resolved	Priority:	Should have
Author:	Adrian Föder	Category:	ViewHelpers
Created:	2012-01-27	Assigned To:	Adrian Föder
Updated:	2012-06-18	Due date:	
Has patch:	No		
Subject:	Verify state and future intentions of a persistence identity VH		

Description

Currently, there is an Identity.JsonViewHelper that has two major drawbacks:

  - the Code Example talks about a Persistence.Identity ViewHelper that only outputs raw 97e7e90a-413c-44ef-b2d0-ddfa4387b5ca, for example
  - the actual output of the Identity.JsonViewHelper is json_encode(array('__identity' => $identifier))

additionally, in the Conference package there's a Identity.Uuid that basically also outputs raw 97e7e90a-413c-44ef-b2d0-ddfa4387b5ca.

I do not agree with the following things in the current situation:

  - I think there should be a better name than Persistence.Identity; the "namespace" Persistence doesn't feel good to me. Let's discuss this, maybe you agree.

  - Outputting JSON would not make much sense; at least I'd expect the RAW value put out that could than be edited further (in this case I agree with the code sample's behaviour or the Conference's Identity.Uuid's(same).

Maybe the Format.Json VieHelper I just pushed could be involved, at least as post-processor using ViewHelper chaining or similar.

I really think we should clean up here some things.

--

While writing this, I think at least correcting the Code Example should be duty, and there should be a new flag called e.g. "rawIdentifier" that only returns the plain ID string with no JSON around.

But, well, the VH's name is already JSON, so...
what? :)

Just tell me some guidelines, I will gladly do it.
