

TYPO3.Fluid - Bug # 3359

Status:	Resolved	Priority:	Should have
Author:	Sebastian Kurfuerst	Category:	
Created:	2009-05-18	Assigned To:	Sebastian Kurfuerst
Updated:	2010-10-20	Due date:	
Has patch:			
Affected Flow version:			
Subject:	Restructure Class structure in Fluid Core		
Description			
I propose to change the Fluid Core classes like that:			
Core/ ViewHelper/ Facets/ AbstractViewHelper TagBasedViewHelper TagBuilder ViewHelperContext ViewHelperException? ViewHelperInterface ViewHelperArguments -> Arguments? Parser/ SyntaxTree/ ParsedTemplateInterface ParsingException? ParsingState TemplateParser			
This changes the following public API classes: Core\TemplateParser -> Core\Parser\TemplateParser.

Fluid:

- Restructuring node architecture (fixes #3359)

History

#1 - 2009-05-18 09:49 - Bastian Waidelich

So you would have:

```
Core/  
ViewHelper/  
Facets/  
ChildNodeAccessFacet  
PostParseInterface  
AbstractViewHelper  
TagBasedViewHelper
```

TagBuilder
ViewHelperContext
ViewHelperException?
ViewHelperInterface
ViewHelperArguments -> Arguments?
Parser/
 SyntaxTree/
 AbstractNode
 ArrayNode
 ObjectAccessorNode
 RootNode
 TextNode
 ViewHelperNode
 ParsedTemplateInterface
 ParsingException?
 ParsingState
 TemplateParser
View/
 [...]
ViewHelpers/
 [...]
Exception
Fluid

correct?

Seems good to me!

I'd rename **ViewHelper/ViewHelperException** to **ViewHelper/Exception**, **ViewHelper/ViewHelperArguments** to **ViewHelper/Arguments** and **Parser/ParsingException** to **Parser/Exception**
