

## TYPO3.Flow - Feature # 33710

<b>Status:</b>	New	<b>Priority:</b>	Should have
<b>Author:</b>	Marc Neuhaus	<b>Category:</b>	
<b>Created:</b>	2012-02-06	<b>Assigned To:</b>	
<b>Updated:</b>	2012-02-06	<b>Due date:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>	No		
<b>Complexity:</b>			
<b>Subject:</b>	Configuration based on Domain		
<b>Description</b>			
<p>i know you can change the Configuration based on the Context through apache config and htaccess.</p> <p>I'm currently forced to work with Drupal, and the only "good" thing about it so far is the concept of handling multisites.</p> <p>Basically it selects the settings.php based on the domain names.</p> <p>Example: default/settings.php dev.my-domain.com/settings.php <a href="http://www.my-domain.com/settings.php">www.my-domain.com/settings.php</a></p> <p>For a detailed explanation take a look here: <a href="http://drupal.org/documentation/install/multi-site">http://drupal.org/documentation/install/multi-site</a></p> <p>I think it would be really neat to have this behavior in FLOW3.</p> <p>Example:</p> <p>Configuration/Settings.yaml Configuration/www.my-domain.com/Settings.yaml Configuration/dev.my-domain.com/Settings.yaml Configuration/localhost.my-domain/Settings.yaml</p> <p>By the way, Subfolders are handled like this:</p> <p>localhost.my-domain -&gt; localhost/my-domain 192.168.1.23.my-domain -&gt; 192.168.1.23/my-domain</p> <p>Greetings Marc</p>
