Subject:	Shortcut page support

Description

The good old shortcut page type is indeed a useful thing. It should

1. redirect to the target (303) if called
2. in menus the target should point to the target directly
3. the link and uri view helpers for nodes should resolve the shortcut as well
4. shortcuts pointing to shortcuts need to be resolved recursively
5. some options for shortcut mode and target?

[FEATURE] Shortcut TS object

This change adds a Shortcut TS object (TYPO3.TYPO3:Shortcut) that
for now redirects to it's first child page. The menu and link/uri
node view helpers also resolve shortcuts through the frontend node
routepart handler.

Shortcuts are resolved recursively, that is if the first subpage
is again a shortcut, it's first child node is tried.

Some whitespace fixes to the Page class along the way.

Change-Id: I9a12b8a05044e57d0d3106e426d5f1a57859cce3
Resolves: #33723

History

#1 - 2012-02-06 23:21 - Gerrit Code Review

Patch set 3 for branch **master** has been pushed to the review server.
It is available at http://review.typo3.org/8865
