[FEATURE] Track all configuration changes

This change set greatly improves the file monitoring of FLOW3's system relevant files, such as class files, settings, object configuration, policies and translations.

In Development context, changes to any of the above will be tracked and the related caches are flushed. For performance reasons, the new mechanism does not rely on the tagging feature of the cache framework, but uses the new Simple File Backend and rather flushes a few caches too many than missing an important change.
