TYPO3.Flow - Bug # 33882

Status:	Rejected	**Priority:**	Should have
Author:	Kira Backes	**Category:**	I18n
Created:	2012-02-13	**Assigned To:**	Karsten Dambekalns
Updated:	2012-02-16	**Due date:**	

PHP Version:	
Has patch:	No
Complexity:	
Affected Flow version: Git master	
Subject:	XliffParser does not allow id-less translation

Description

If I want to translate completely without IDs I'm still forced to add IDs in the translation .xlf, because the id-less translation entries are overwritten at the following code (line 47 TYPO3.FLOW3/Classes/I18n/Xliff/XliffParser.php):

```
$parsedData['translationUnits'][(string)$translationElement['id']][0] = array(
    'source' => (string)$translationElement->source,
    'target' => (string)$translationElement->target,
);
```

This is fixed by replacing the previous code with the following:

```
$translationElementId = (string)$translationElement['id'];
if ($translationElementId === '') {
    $translationElementId = uniqid();
}
$parsedData['translationUnits'][$translationElementId][0] = array(
    'source' => (string)$translationElement->source,
    'target' => (string)$translationElement->target,
);
```

History

#1 - 2012-02-13 14:13 - Kira Backes

- Project changed from TYPO3 Flow Base Distribution to TYPO3.Flow

#2 - 2012-02-16 10:48 - Karsten Dambekalns

- Category set to I18n

- Status changed from New to Rejected

- Assigned To set to Karsten Dambekalns

- Has patch set to No

This will never change, as XLIFF requires id attributes to be present. Plus, id-based translation is recommended as it is more reliable and distinctive.

#3 - 2012-02-16 10:57 - Kira Backes

Okay, but then you should throw an exception in case of a missing id attribute?

#4 - 2012-02-16 11:10 - Karsten Dambekalns

Good point, I created #33971 for that.
