

TYPO3.Flow - Bug # 33932

Status:	Resolved	Priority:	Must have
Author:	Alexander Berl	Category:	AOP
Created:	2012-02-15	Assigned To:	Karsten Dambekalns
Updated:	2012-05-30	Due date:	
PHP Version:			
Has patch:	No		
Complexity:	no-brainer		
Affected Flow version:	Git 1.0		
Subject:	AOP Proxy Compiler does not handle numeric annotation parameters		
Description			
<p>In the TYPO3\FLOW3\Object\Proxy\Compiler::renderAnnotation function, there is currently no case for numeric annotation members, which leads to such values being parsed out of the original code.</p> <p>When this happens, an Exception is thrown in Doctrine Annotation Parser that an identifier is expected instead of ")".</p>			
Test Case:			
<ul style="list-style-type: none">- Create new annotation with an integer class member (e.g. "amount").- Annotate a method or class with the annotation, setting the amount via <code>@annotation(amount=X)</code>			
Expected:			
The proxy class contains the same annotation <code>@annotation(amount=X)</code>			
Actual:			
The proxy class contains the annotation <code>@annotation(amount=)</code> and a parsing exception is thrown within Doctrine.			
If the parameter is set directly, no exception is thrown, but the parameter is also parsed out of the proxy class docblock (i.e. <code>@annotation</code> instead of <code>@annotation(X)</code>)			
Solution:			
Add a elseif case inside renderAnnotation that checks for <code>is_numeric</code> :			
<pre> } elseif (is_numeric(\$optionValue)) { \$optionValueAsString = \$optionValue;</pre>

Revision 895d48b9 - 2012-02-20 16:32 - Karsten Dambekalns

[BUGFIX] Fixes handling of numeric annotation parameters

Annotations like `@FooBar(amount=2)` lost their parameter value in `renderAnnotation()`. This change fixes that.
