PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Encapsulate i18n configuration so it can be passed around and modified easily		
Description			

The behavior of the i18n component needs to be configurable, down to per request in some cases. Thus a configuration object to hold configuration should be available.

[!!!][FEATURE] Adds i18n configuration holder

To control the behavior of the i18n component a way to
configure the "current" locale, fallback rules for resolving
of translations and possible more is needed.

This change adds a Configuration object to the i18n code
which encapsulates the configurable parts.

For early adopters this change means the calls to
getDefaultLocale() and getCurrentLocale() on I18n\Service
need to be routed to Service->getConfiguration()->…
instead.
