

TYPO3.Flow - Feature # 34172

Status:	Resolved	Priority:	Must have
Author:	Karsten Dambekalns	Category:	I18n
Created:	2012-02-22	Assigned To:	Karsten Dambekalns
Updated:	2012-02-24	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Implement fallback rules for i18n		
Description			
Currently the only fallback applied when resolving translations is the implicit chain in locale, e.g. en_UK > en			
It should be possible to define an order for fallback instead, so that one can say <i>requested</i> > de > za > <i>default</i> should be used.

[FEATURE] Adds fallback rules for locale resolution

Allows to set a fallback order for locale resolving. If not set, the implicit inheritance of locales will be used. That is, if a locale of en_UK is requested, matches will be searched for in en_UK and en before trying the default locale configured in FLOW3.

If FLOW3 is given an order of [dk, za, fr_CA] a request for en_UK will be looked up in en_UK, en, dk, za, fr_CA, fr before trying the default locale.

If strict rule adherence is requested, the above example would instead look in en_UK, dk, za, fr_CA before trying the default locale. In other words, the implicit fallback is not applied to the locales in the fallback rule.
