TYPO3.Fluid - Bug # 34186

Status:	Closed	**Priority:**	Should have
Author:	Kira Backes	**Category:**	ViewHelpers
Created:	2012-02-22	**Assigned To:**	Bastian Waidelich
Updated:	2015-02-25	**Due date:**	

Has patch:	No
Affected Flow version:	Git 1.0
Subject:	Setting a value always resets the field on mapping errors

Description

If I set a value on any field of the form it gets reset every time there
is a mapping error, so the user has to reenter the field every time.

Could easily be fixed by changing the order of the if-clause in
\TYPO3\Fluid\ViewHelpers\Form\AbstractFormFieldViewHelper::getValue

Okay, it's not that easy to just change the if-else order, then submit buttons disappear.. I guess we need another attribute for a start value like that or
we only use the submitted form data if it is not NULL.

#2 - 2012-02-22 16:53 - Bastian Waidelich

Hi Kira,

Please provide more information. Did you use one of the form viewhelpers (which one?) and bind it to a property of the form object? Can you provide
some (fluid) code snippets?

- Assigned To set to Sebastian Kurfuerst

OK; the automatic fill-in does is partly broken when not using object accessor mode.

Fix is underway.

Truly sorry for the huge delay, this was a tricky one (because it is a breaking behavior).. But I just moved this to https://jira.typo3.org/browse/FLOW-213
and take care of it right now
