[BUGFIX] NotFoundView sets 404 status

The default NotFoundView, which renders a 404 template, sets now also the HTTP status to 404.

- Category set to MVC

- Target version set to 1.1

Under what circumstances is this needed - the NotFoundController sets the status to 404, so out of the box it works as expected...

Karsten, the NotFoundController way isn't involved in every NotFoundView invocation; the NotFoundView is used every time for example a template file could not be found. In my special case it was a .json (format) request that was not covered by the controller's "allowedFormats" and "formatToViewObjectNameMap" (?). In all three cases the correct controller is used (hence not the NotFoundController), but the NotFoundView comes to action.
