Subject:	Provide JavaScript sample for JSON usage		
Description			

Bastian wrote:

> It would be cool if we added a 2nd javascript file that does not require jQuery and shows the second usage (transferring JSON).

Well, basically my implementation uses MooTools, and it's very very verbose (I wrote an MVC handler around it...).
I gladly could rewrite some working-dummy-code for MooTools; Question for that is:

- What should be shown/presented?
- And, if not MooTools, what else? Rough pure JavaScript may result in too much stuff that JS Frameworks already do intrinsically.
(pro MooTools: it has a self-explanating method naming, unlike jQuery, for example :-P (SCNR :)
