TYPO3.Flow - Bug # 35007

Status:	Resolved	**Priority:**	Must have
Author:	Christopher Hlubek	**Category:**	- Testing -
Created:	2012-03-19	**Assigned To:**	Karsten Dambekalns
Updated:	2012-05-01	**Due date:**	

PHP Version:	
Has patch:	No
Complexity:	
Affected Flow version:	Git master
Subject:	Functional tests do not work with MySQL database

Description

If persistence is enabled in functional tests and a MySQL database is configured, I get the following error when executing the test on a clean database:

    1) Planetflow3\Tests\Functional\Controller\StandardControllerTest::indexActionWithoutParametersDisplaysRecentItems
    PDOException: SQLSTATE[42S01]: Base table or view already exists: 1050 Table 'persistence_testentity' already exists

[BUGFIX] Use lowercase table names to fix functional tests

There seems to be a problem with (certain versions of) MySQL and
lower / uppercase table names (maybe only on case insensitive
filesystems).

This change adjusts some Table annotations used in functional
test fixtures to use lowercase identifier.

Change-Id: I9a73567437864d322210858dc6d0a4736553221a
Fixes: #35007
Releases: 1.1

- Status changed from Accepted to Needs Feedback

Works for me using a Phoenix setup. Are you sure in your test setup/teardown are called?

#3 - 2012-04-26 13:35 - Christopher Hlubek

This seems to be a problem with MySQL and lower / uppercase table names (maybe only on case insensitive filesystems).

We have to make sure that table names are handled consistently. When creating tables, they are spelled mixed-case (depending on table option). On tearDown the tables are dropped with lowercase.

#4 - 2012-04-26 14:00 - Karsten Dambekalns

I remember we talked about that during T3DD12 - i'll change the table annotation in the fixture and submit a change (or could you do that)?

That would be more of a hotfix - since setup and teardown just use Doctrine Schema tools, it should work the same in both ways, no? Doctrine bug?

#5 - 2012-04-26 14:58 - Christopher Hlubek

I tried to fix that, but it didn't work either (maybe my test database was already "corrupted"). I upgraded from MySQL 5.1.46 to 5.1.61 (Mac Ports) and don't get the problem anymore. But I still think that the annotation should be lowercase for consistency.
