Has patch:			
Complexity:			
Subject:	Apply new conventions for naming of Domain Models and Repositories		
Description			
<p>The naming conventions for domain models, validators and repositories should change to the following scheme:</p>			
<pre>\F3 \Blog \Domain \Model Blog CommentInterface AbstractComment GoodComment Badcomment \Repository BlogRepository PostRepository \Validator BlogValidator EverythingFineValidator</pre>			
<p>This probably requires changes in the resolving mechanism for validators and repositories. Make sure that also substructures are supported:</p>			
<pre>\Domain \Model \Content ContentInterface AbstractContent Page Text Site StructureNode \Repository \Content PageRepository SiteRepository StructureNodeRepository</pre>			
<p>Document the new conventions in the manual.</p>
