

TYPO3.Flow - Bug # 35096

Status:	Closed	Priority:	Should have
Author:	Sebastian	Category:	MVC - Routing
Created:	2012-03-21	Assigned To:	Bastian Waidelich
Updated:	2012-11-25	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: (any)			
Subject:	Subroutes can't use empty uriPattern as fallback		
Description			
<p>I have several packages, for each package I like to create a routing shortcut. So that instead of using these urls</p> <pre>test.local/Myverylongpersonalname.Myproject/posts test.local/Myverylongpersonalname.MyprojectTest/images</pre> <p>I can use these</p> <pre>test.local/mm/posts test.local/test/images</pre> <p>I prefer to shorten the routes by adding subroutes to the global Routes.yaml like this:</p> <pre>- name: 'Myverylongpersonalname Myproject' uriPattern: 'mm/<MMSubroutes>' defaults: '@package': 'Myverylongpersonalname.Myproject' subRoutes: MMSubroutes: package: Myverylongpersonalname.Myproject</pre> <p>Now I would expect that I can add uriPattern: "" as a fallback route in the Routes.yaml of Myverylongpersonalname.Myproject, but I get:</p> <pre>The URI pattern "mm/" of route "Myverylongpersonalname Myproject :: fallback" ends with a slash, which is not allowed. You can put the trailing slash in brackets to make it optional.</pre> <p>Well and uriPattern: '(/)' doesn't work either.</p>
