PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Additional possible keys in source array for DateTimeConverter		
Description			
At the moment, the following is allowed:			
1/*			
2 * By using an array as source you can also override time and timezone of the created DateTime object:			
3 * array(
4 * 'date' => '<dateString>',			
5 * 'hour' => '<hour>', // integer			
6 * 'minute' => '<minute>', // integer			
7 * 'seconds' => '<seconds>', // integer			
8 * 'timezone' => '<timezone>', // string, see http://www.php.net/manual/timezones.php			
9 *);			
10			
Analog to this, it'd be good to allow three additional keys for day, month, year. This makes it possible to feed the source by independent <select> boxes for example, where each select box is day, month or year.

[FEATURE] Day, month, year keys in DateTimeConverter source array

This patch introduces additional possible array keys for the source array of the DateTimeConverter. Now not only a string representing the DateTime can be passed, but array keys of the single day, month and year.
