Did you try to change the Temporary Directory like it is described in the documentation? There are some problems with long pathes under windows...

#2 - 2009-06-04 09:56 - David Bruehlmeier

Hi Tim,

thanks for the tip. It works!

For future reference, this is the link to the relevant doc page: <u>http://flow3.typo3.org/documentation/reference/introduction/?user_staticdocinclude_pi1[filepath]=ch02s02.html&cHash=a43866e246</u>

On Windows systems PHP causes problems with long filenames. To avoid errors you should change the configuration of the cache to a place

that leads to a very short absolute filepath, for example C:\t\ or C:\t\x\ (if you want to install more than one instance of FLOW3). Do that by adding the following lines to the file Configuration/FLOW3.yaml in your FLOW3-Distribution (the indenting must be done with two spaces):

utility:

environment:

temporaryDirectoryBase: C:/t/x/
