

## TYPO3.Flow - Feature # 35781

<b>Status:</b>	New	<b>Priority:</b>	Should have
<b>Author:</b>	Julian Wachholz	<b>Category:</b>	Validation
<b>Created:</b>	2012-04-08	<b>Assigned To:</b>	
<b>Updated:</b>	2012-04-08	<b>Due date:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>	No		
<b>Complexity:</b>			
<b>Subject:</b>	Model validation		
<b>Description</b>			
<p>Currently, only (action)method arguments and single properties in a Model can be tagged with @Validate.</p> <p>In some cases however, it might be useful to validate a model in its entirety, especially if it's quite a complex one that needs rules between multiple properties.</p> <p>Model validation would occur <i>after</i> all properties have been set and validated.</p> <p>Right now, one can always annotate the next higher location where the model is used, but I think that this is redundant and related to the model. Method argument validators should use validation in the action specific context.</p>
