Has patch:	No		
Complexity:			
Subject:	Lifecycle method after property mapping		
Description			
<p>Currently, there is initializeObject() that is called after DI. There is, however, no method that is called after property mapping. Having such a method would enable us e.g. to set some more properties after creating an object from a form.</p> <p>Another option (instead of a "real" object lifecycle method) would be to have a method that is called solely by the property mapper after it has done its job.</p>
