Subject:	Support value objects in the Object Factory		
Description			
The Object Factory should have special support for value objects.			
Value objects are in fact a mixture of prototype and singleton - although multiple instances of a class may exist, we should only create one instance with the same constructor arguments. The Object Factory (and Object Manager) should return an existing value object if a new one with exactly the same arguments (properties) is requested.

- Status changed from New to Accepted

- Priority changed from Could have to Should have

- Start date deleted (2009-06-05)

- Estimated time set to 12.00

- value objects are immutable because they must not have setters
- values are passed through the constructor
- calculate hash over constructor arguments + object name and use them in the registry / unit of works
- what about arrays / objects as parameters?
