

TYPO3.Fluid - Bug # 35894

Status:	Resolved	Priority:	Must have
Author:	Sebastian Wojtowicz	Category:	ViewHelpers
Created:	2012-04-12	Assigned To:	Sebastian Wojtowicz
Updated:	2012-06-18	Due date:	
Has patch:	No		
Affected Flow version:	Git master		
Subject:	CheckboxViewHelper and RadioViewHelper missing an existence check for formObject, and thus an exception is being thrown		
Description			
Scenario:			
Controller:			
indexAction(FormObject \$formObject = NULL){ ... }			
Template:			
<f:form ... object="{formObject}" >			
<f:form.checkbox property="somePropertyOfFormObject" value="yes"/>			
...			
This scenario fails with			
#1243325768: No value found for key "TYPO3\Fluid\ViewHelpers\FormViewHelper->formObject"			
The problem is that in the CheckboxViewHelper and the RadioViewHelper we call <code>\$this->getPropertyValue()</code> which calls <code>\$formObject = \$this->viewHelperVariableContainer->get('TYPO3\Fluid\ViewHelpers\FormViewHelper', 'formObject')</code> ; even though we did not check if the formObject exists, so that instead we get thrown an exception.			
For example in CheckboxViewHelper.php, Line 80 before we call <code>getPropertyValue()</code> we only check			
if (<code>\$this->isObjectAccessorMode()</code>)			
while all other [InputType]ViewHelper always check (in the <code>getValue()</code> function):			
if (<code>\$this->isObjectAccessorMode()</code>) &&			
<code>\$this->viewHelperVariableContainer->exists('TYPO3\Fluid\ViewHelpers\FormViewHelper', 'formObject')</code>)			
So I think that in CheckboxViewHelper, Line 80 and in RadioViewHelper, Line 81 there should also be the same check for the existence of the formObject. Unless someone knows of a better place to inject that bugfix.

Revision cbe93048 - 2012-06-18 15:22 - Rens Admiraal

[BUGFIX] Fix unusable checkbox/radio if formObject is NULL

When using a form object inside of a form view helper inside an index action template and a checkbox is referring to a property \$sth of \$someFormObject, the form object can be NULL with code like:

```
indexAction(\Some\Type $someFormObject = NULL){ ... }  
&lt;/f:form ... object="{someFormObject}"&gt;  
  &lt;/f:form.checkbox property="{sth}" value="yes" checked="{sth.value} == yes"/&gt;  
&lt;/f:form&gt;
```

Initially calling the index action makes someFormObject NULL. If the submitted form had validation errors someFormObject is NULL, too. This possibility was ignored in a call for the formObject from within the CheckboxViewHelper as well as from the RadioViewHelper.

So you would get an exception telling you
No value found for key "TYPO3\Fuild\ViewHelpers\FormViewHelper->formObject"

This change fixes that bug and thus also sets the checkbox and radio "checked" attribute properly when a validation error occurred.

History

#1 - 2012-04-18 22:45 - Karsten Dambekalns

- Target version changed from 1.0.4 to 1.0.5

#2 - 2012-05-26 02:59 - Sebastian Wojtowicz

- Target version changed from 1.0.5 to 1.1 beta 2

- % Done changed from 0 to 10

The problem is that we get formObject = NULL

1. ... if we visit the index action
2. ... if the form submit fails

So upper code changes fix the exception, but at least the checkbox code doesn't seem to expect this and so the automatic checked=checked or not checked setting reflecting the last submitted form values simply does not work. So this needs to be fixed as well.
