

TYPO3.Flow - Feature # 3618

Status:	Closed	Priority:	Should have
Author:	Andreas Förthner	Category:	Security
Created:	2009-06-08	Assigned To:	Andreas Förthner
Updated:	2010-10-20	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Subject:	Extended ACL possibilities		
Description			
Currently ACLs only cover PHP methods as resources. In the future we will need some more functionality like:			
<ul style="list-style-type: none">- read/write/add/delete persisted domain objects (covered by the JCR Security package)- add constraints to ACL entries, to authorize based on: object attributes, security context/user attributes, method parameters(?) (maybe this can also be integrated in the privilege definitions)			
<ul style="list-style-type: none">- automatic query rewriting (a query should only return accessible objects: perhaps already covered by the JCR Security package)- ResourceManager integration (files)
