

TYPO3.Kickstart - Bug # 36185

Status:	Closed	Priority:	Should have
Author:	Sven Leuschner	Category:	
Created:	2012-04-16	Assigned To:	Sven Leuschner
Updated:	2012-05-21	Due date:	
Affected Flow version: FLOW3 1.0.3			
Subject: Creation of packages fails or they cannot be called later			
Description			
<p>I followed exactly the Quickstart-Guide provided with flow3 1.04 I managed to get it running out of the box to the welcome-screen, then followed the written lines about setting some environment-variables and creating a basic package</p> <pre> "flow3 kickstart:package MyCompany.MyPackage"</pre> <p>That seems to work as intended as 2 lines indicate the creation of directories in Installation-Path->Package->Application</p> <p>But when I call them in my browser (Opera and Mozilla Firefox) -> http://localhost/flow3/Web/MyCompany.MyPackage , I get a nice error message:</p> <p>Uncaught Exception in FLOW3 #1218473352: The action name must start with a lower case letter, "MyCompany" does not match this criteria. (More information)</p> <p>TYPO3\FLOW3\MVC\Exception\InvalidActionNameException thrown in file E:\xampp\htdocs\flow3\Data\Temporary\Development\Cache\Code\FLOW3_Object_Classes\TYPO3_FLOW3_MVC_Web_Request_riginal.php in line 331. Reference code: 20120416232925d34ff1</p> <p>Unfortunately the "More information"-Link in the error-page leads to an empty page (There is currently no text in this page)</p> <p>the same happens when I follow the Quickstart further and create Acme.Demo</p> <p>When I try to "circumvent" the error by simply creating the packages using lowercase, I get an error from kickstart telling me I have to use uppercase ... so a nice circular error-connection - or not so nice</p>

Well I solved that - thanks to a single screenshot from your quickstart-guide

Every URI contains the package names with Upercase-Start (as the kickstart:package - command requests as I worte before)

BUT in the single screenshot showing an example in Safari its clearly visible that in the URI the packageName+Controller should be written all lowercase

so <http://localhost/flow3/Web/Acme.Demo> turns into <http://localhost/flow3/Web/acme.demo> and it works now

I would really appreciate if the quickstart-guide could be adjusted to clearly tells you to use lowercase package-names when calling the created package in your browsers'-address-line

thanks

- *Target version changed from 1.0.4 to 1.0.5*

#3 - 2012-05-21 17:25 - Karsten Dambekalns

- *Status changed from New to Closed*

Works fine with 1.0.4 here, the case of the URL does not make a difference. If this is still an issue with the latest 1.0.x version, please reopen and supply additional information to help us reproduce the issue.
