<b>Complexity:</b>			
<b>Subject:</b>	Move XLIFF files around so that their use is Pootle-compatible		
<b>Description</b>			
<p>We need to change the way we put XLIFF files into the filesystem, so that we can use Pootle.</p> <p>We have a problem with the FLOW3 project on the translation server. Currently the filename is something like Main.en.xlf, Main.de.xlf ... And that naming convention is not supported by Pootle.</p> <p>We can use two different schema:</p> <ol style="list-style-type: none"><li>1. A directory tree, but the XLIFF file must have the same name in each language project (like v4 use)</li><li>2. The GNU way, with filename like en.xlf, de.xlf, ... but only one file per project.</li></ol>

[TASK] Move XLIFF files so that Pootle copes with the file layout

This changes the file layout for translations so that for every language a directory named after the locale identifier is looked up below Resources/Private/Translations. Inside that directory one XLIFF file for each message catalog can be put:

```
Resources/Private/Translations/  
  en/  
    Main.xlf  
    ValidationErrors.xlf  
  fr/  
    Main.xlf  
    ValidationErrors.xlf
```

Change-Id: I1b2907b190f319e02d67a916da0464f3be0317a1

Resolves: #36284

Releases: 1.1

### History

#1 - 2012-04-18 11:48 - Karsten Dambekalns

The solution will be to use variant 1) as seen above:

```
Resources/Private/Translations/  
Main/  
  en.xlf  
  de.xlf  
SomeCatalog/  
  en.xlf  
  fr.xlf
```

- *Status changed from Accepted to Under Review*

Patch set 1 for branch **master** has been pushed to the review server.

It is available at <http://review.typo3.org/10612>

**#3 - 2012-04-20 15:36 - Dominique Feyer**

This more like what Pootle named "GNU Style Project", but I'm not sure if in the mode we can have subdirectory. Currently I'm on huge amount of work, so no time to validate this. Can you try to send an email to the official Pootle Mailing list ? Their are really friendly during the TYPO3v4 configuration ?
