

TYPO3.TypoScript - Bug # 36303

Status:	Closed	Priority:	Could have
Author:	Christian Jul Jensen	Category:	_old
Created:	2012-04-18	Assigned To:	Karsten Dambekalns
Updated:	2012-07-13	Due date:	

Subject: Templates are only loaded from rootlevel

Description

Not sure if this is a bug, just wanted to be sure that you know that the behaviour has changed.

After updating a site to new TypoScript, the root template was not loaded. It was located in TypoScripts/homepage/Root.ts2, moving it to TypoScripts/Root.ts2 solved the problem. It seems that "extension templates" are still loaded from folders with the rootname, but the main template did not.
