Subject:	Using Locale parser in Float TypeConverter		
Description			
since the Validator has it, it would be nice and useful to let the Property Mapper use the Locale parser to differentiate between various given decimal and thousands separators

[FEATURE] FloatConverter uses Locale parser

If configured using the Property Mapping Configuration, the FloatConverter now can also use the Locale parser to get the intended `float` value from a string input.

[BUGFIX] Fix functional tests after FloatConverter change

Somehow two failing functional tests went unnoticed so far, broken with Ib95c52d958d765eb0a9cd20e415642186e25ee57.

I'd suggest using `$this->localizationService->getConfiguration()->getCurrentLocale()` instead of `$this->localizationService->getConfiguration()->getDefaultLocale()`, because it falls back to default locale but allows for overriding the locale via code (for example by parsing Accept-Language headers, or from session).

Other than that +1

- File *0001-FEATURE-FloatConverter-uses-Locale-parser.patch* added

I'm not sure how to push a change to this changeset and found no one on the IRC channel to give me some hints, so I'm just adding a patch diff.

This fixes the failing test when no configuration is given with the `convertFrom` call, adds conversion from float => float which resolves #35173 and adds some more unit tests for the new functionality.
