Updated:	2012-04-23	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Allow "configurable" classes path in packages		
Description			
<p>Currently, the class loader expects to find classes inside "Classes" of each package. While this is fine for FLOW3 packages, it blocks (easy) use of other PSR-0 compatible packages - the code always has to be moved into "Classes". To make use of 3rd party code easier, e.g. by using Composer, we need to be able to specify a mapping of package keys to entry points for the class loader.</p> <p>This change c/should remove the .Shortcuts folder again and could also make "overlapping" package keys possible (e.g. TYPO3.JobQueue and TYPO3.JobQueue.Beanstalk).</p>

[FEATURE] Allow "configurable" classes path in packages

Package instances can be asked for their classes path, which is now set determined by the PackageManager and stored in PackageStates.php.

It can - in the future - thus be read from a Composer file and does no longer have to be the hardcoded "Classes".

This change removes the use of the .Shortcuts folder again and makes "overlapping" package keys possible (e.g. TYPO3.JobQueue and TYPO3.JobQueue.Beanstalk).
