[!!!][TASK] Clean up Environment after HTTP refactoring

With the HTTP foundation quite some things from Environment have become obsolete. The class and it's "users" are adjusted in this change.

The following methods are removed from Environment (check Http\Request to see if a method you need is available there) with this change:

- setBaseUrl
- getHTTP\*
- getAcceptedFormats
- getRemoteAddress
- getRemoteHost
- getRequestProtocol
- getRequestUri
- getBaseUrl
- getScriptPathAndFileName
- getScriptRequestPathAndFileName
- getScriptRequestPath
- getRequestMethod
- getCommandLineArgumentCount
- getCommandLineArguments
- getSAPIName
- getRawGetArguments
- getRawPostArguments
- getUploadedFiles
- getRawServerEnvironment

Most of those were marked as public API, but we still decided to drop them, as their use cases were only guesswork.

For some things that used to be available, access to the current request is now needed. For this, `getHttpRequest()` was added to the new `HttpRequestHandlerInterface`, which returns the current `HttpRequest`.
