TYPO3.Flow - Bug # 36637

Status:	Resolved	**Priority:**	Should have
Author:	Andreas Förthner	**Category:**	AOP
Created:	2012-04-26	**Assigned To:**	Andreas Förthner
Updated:	2012-04-27	**Due date:**	
PHP Version:			
Has patch:	No		
Complexity:	easy		
Affected Flow version:	Git master		
Subject:	AdviceChain works with the wrong proxy instance in some cases		
Description			

As the AdviceChain gets its proxy by a constructor argument, it might work on the wrong instance if the advice is used in different instances of the same object type. To solve this, the advice chain should always fetch the proxy instance from the current joinpoint.

Revision 7a79ea2c - 2012-04-26 23:53 - Andreas Förthner

[BUGFIX] AdviceChain has to take the proxy from the joinpoint

The advice chain object got its proxy instance in the constructor,
which was possibly not the correct instance for a given joinpoint.
This change removes the constructor parameter and fetches the proxy
instance always from the current joinpoint.
