

TYPO3.Form - Bug # 36664

Status:	Resolved	Priority:	Should have
Author:	Marc Neuhaus	Category:	
Created:	2012-04-27	Assigned To:	Bastian Waidelich
Updated:	2012-06-04	Due date:	
Subject:	FormElements can't handle BackendModule Requests		
Description	<p>The current implementation of the Request handling only works for one getParentRequest level. This fails in the Context of the Phoenix BackendModule because the Request is hidden deeper.</p> <p>Attached is a diff to go as deep as it needs to go.</p>

[TASK] Use plugin namespace as argument namespace for sub requests

The use of plugin arguments instead of regular arguments is needed after the HTTP rewrite, since all arguments of sub controllers/requests are now defined at root level. Since the form is a plugin this makes sense.

- *Status changed from New to Needs Feedback*

Could you quickly check whether <https://review.typo3.org/#/c/10755/2> fixes this for you?

#3 - 2012-05-02 18:12 - Marc Neuhaus

I've just tried that patch without success.

the \$pluginArguments and the request stays empty.

This results in simply Rerendering the original form, because no submitted data is detected.

#4 - 2012-05-25 15:12 - Marc Neuhaus

Just tried the latest version of FLOW3 again, still not working. the Form package doesn't receive any arguments :/

The request in FormRuntime.php line 161 has no arguments at all.

Did <https://review.typo3.org/#/c/10333/> solve your issue (together with the patch from <https://review.typo3.org/#/c/10755/>) ?

#6 - 2012-06-04 01:02 - Marc Neuhaus

Those 2 Patches seem to do the trick :)

You can close this issue.

#7 - 2012-06-04 09:40 - Marc Neuhaus

- File *FormRuntime.diff* added

Although this additional Patch would make this thing work in any Request :)

#8 - 2012-06-04 11:33 - Bastian Waidelich

- Status changed from *Needs Feedback* to *Resolved*

- Assigned To set to *Bastian Waidelich*

Thanks for your input. I incorporated your last suggestion into <https://review.typo3.org/#/c/10755/5>
