

TYPO3.Flow - Bug # 36684

Status:	Closed	Priority:	Should have
Author:	Karsten Dambekalns	Category:	- Testing -
Created:	2012-04-28	Assigned To:	Karsten Dambekalns
Updated:	2012-06-25	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: Git 1.1			
Subject:	Fixes for functional security tests break custom tests		
Description			
<p>In FunctionalTestCase.php the line <code>\$this->securityContext->refreshTokens();</code> causes severe problems for Christopher Hlubek's tests that deal with security. That line was added in https://review.typo3.org/9676 to fix #34466.</p> <p>I tested without that line and indeed all functional security tests in FLOW3 still pass, if the exception expectation in MethodSecurityTest is again changed from AuthenticationRequiredException to AuthenticationRequiredException.</p> <p>Christopher: how do your tests fail? Maybe you also have the same wrong expectation?</p>

Christopher, we decided to submit that change and rather fix this (small) issue separately instead of further working on that huge stack of changes... so please give feedback :)

I'm debugging it right now. It seems that "`$this->disableAuthorization()`" doesn't do that with the fix for #34466 in place. Since no tokens are authenticated anymore, any code that needs authentication throws an AuthenticationRequiredException. So we need to authenticate a token here to disable authorization (sounds funny).

I'll try to create a functional test in FLOW3 that tests this behavior.
