

## TYPO3.Flow - Bug # 36804

<b>Status:</b>	New	<b>Priority:</b>	Should have
<b>Author:</b>	Robert Lemke	<b>Category:</b>	Persistence
<b>Created:</b>	2012-05-03	<b>Assigned To:</b>	
<b>Updated:</b>	2012-05-03	<b>Due date:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>	No		
<b>Complexity:</b>	hard		
<b>Affected Flow version:</b>	Git master		
<b>Subject:</b>	Orphaned entities within aggregates are not removed		
<b>Description</b>			
Consider this example:			
An entity Image has a many-to-one or one-to-one relation to an entity Resource.			
Image is an aggregate root and is stored in an ImageRepository.			
Resource does not have its own repository and thus is a practically member of the Image aggregate.			
Now, if an Image object is removed, its Resource object remains in the database and can't accessed through any object or repository anymore.

### History

#### #1 - 2012-05-03 11:22 - Karsten Dambekalns

Not a cascade problem - it would need orphanRemoval, but that is not available for the association type used...
