

TYPO3.Flow - Bug # 36859

Status:	Closed	Priority:	Should have
Author:	Marc Neuhaus	Category:	MVC - Routing
Created:	2012-05-05	Assigned To:	Bastian Waidelich
Updated:	2012-05-21	Due date:	
PHP Version:			
Has patch:	Yes		
Complexity:			
Affected Flow version: Git master			
Subject:	URLs Break if the Route return a URI with Query string		
Description			
<p>In cases where the Route returns an URI with a Query String attached the URI Builder adds a second ? to append the query string. In my case this happens through the BackendModuleArgumentsRoutePartHandler which already adds a query string.</p> <p>I've attached a patch to check the matchingUri for a ? to append the query with a ? or & depending on that check.</p>
