[BUGFIX] Quick fix to prevent live nodes to be published

The publishing mechanism is publishing the same node twice which causes the node to be in the live workspace already on the second try. This causes a 'Response: null' on the ExtJS requests because of the Workspace object to call the getName() method of it's baseWorkspace. This is not possible in the live workspace as it has no baseWorkspace.

Fixing the actual underlying problem in the node publishing must still be done, see #37072
