

TYPO3.Media - Bug # 37230

Status:	Resolved	Priority:	Should have
Author:	Carsten Bleicker	Category:	
Created:	2012-05-16	Assigned To:	Adrian Föder
Updated:	2012-11-07	Due date:	
Subject:	Image TypeConverter does not allow to map Image by Identity		
Description			
<p>I want to remove an Image Entity from another Entity by its Identity. So i used <code><f:link.action action="remove" arguments={section:section,image:image}> ...</code> The resulting URI looks like this: &section[__identity]=29870197-33ca-43c7-9649-70c3c0f28004&image[__identity]=51e35272-e273-4aa3-8f3f-bdd0932edb23 controller action just has these mapping infos:**</p> <ul style="list-style-type: none">- Remove Image from a given Section- @param \My\Name\Domain\Model\Section \$section- @param \TYPO3\Media\Domain\Model\Image \$image- @return void <pre>*/ public function removeImageAction(\My\Name\Domain\Model\Section \$section, \TYPO3\Media\Domain\Model\Image \$image){ \$section->removeImage(\$image); \$this->persistenceManager->update(\$section); \$this->redirect('show',NULL,NULL,array('section'=>\$section)); }</pre> <p>But the mapping throws the following exception for this removeImageAction: #1297759968: Exception while property mapping for target type "TYPO3\Media\Domain\Model\Image", at property path "": It is not allowed to map property "__identity". You need to use \$propertyMappingConfiguration->allowProperties('__identity') to enable mapping of this property. (More information)</p> <p>Just for testing i disabled the mathing of the ImageConverter from <code>\$targetType = 'TYPO3\Media\Domain\Model\Image'</code>; to <code>\$targetType = 'TYPO3\Media\Domain\Model\ImageFoo'</code>;</p> <p>And the mapping works again. Can somebody explain me the need of this ImageConverter?</p> <p>Kind regards Carsten</p>

[BUGFIX] Fix Image TypeConverter

The Image TypeConverter now takes care about a given `title` property and takes it into account for the mapping; additionally the handling of mapping persisted Images (i.e. sources with an `__identity` property) works as it used to be for persisted entities.

This is covered by some additional Functional Tests, which have, besides, been augmented a bit and refactored to an abstract functional test case for reusable methods.

ehm, i don't know :)

stopped working on it since 1 month because of daily business :(
sorry
