

TYPO3.Neos - Bug # 37267

Status:	Resolved	Priority:	Must have
Author:	Bastian Waidelich	Category:	Frontend
Created:	2012-05-17	Assigned To:	Christian Müller
Updated:	2014-04-26	Due date:	
Subject:	protected content nodes are rendered		
Description			
<p>Nodes that are restricted to a role (accessRoles) are currently displayed even if the logged in user does not belong to the respective role.</p> <p>Example:</p> <pre>1<node identifier="" type="TYPO3.TYPO3:Text" nodeName="someProtectedNode" locale=""> 2 <accessRoles> 3 <role>Administrator</role> 4 </accessRoles> 5 <properties> 6 <headline>Some headline</headline> 7 <text><![CDATA[8 <p>This should only be visible to Administrators.</p> 9]]></text> 10 </properties> 11</node></pre>			
<p>The text is displayed even if the logged in user is not in the role "Administrator"</p>

[BUGFIX] Protected nodes can never be accessed

Due to a code fix in TYPO3CR a bug with fetching of access protected nodes was uncovered that lead to non accessibility.

The problem was in Routing and PropertyMapping the SecurityContext is not yet setup so roles are not available.

This change allows all nodes to be fetched from the TYPO3CR during those early stages. So access protection must be checked later (already implemented in the NodeController).

Is there any way to give DENY permission to a node like we have DENY in flow's security context? Other way around: Do DENY permission exist for nodedata, I can see only accessroles?
