TYPO3.Flow - Bug # 37302

Status:	Needs Feedback	**Priority:**	Should have
Author:	Carsten Bleicker	**Category:**	Validation
Created:	2012-05-19	**Assigned To:**	Carsten Bleicker
Updated:	2013-07-03	**Due date:**	

PHP Version:	
Has patch:	No
Complexity:	
Affected Flow version: FLOW3 1.1.0 beta 1	

Subject:	NumberValidator

Description

Trying to use the NumberValidator and playing around with the option formatLength.

but an exception is thrown:
#1280218995: Number format was not found. Please check whether CLDR repository is valid

am i doing something wrong or is the cldr a little bit incomplete?

what i am trying to do is just validate an property value against:
@FLOW3\Validate(type="Number", options={ "formatType"="currency", "formatLength"="short"})

defautl format lengts seems to be working but it allows me to set to many decimals.
f.e. it allows xxx,xxx but i want to allow only xxx,xx

the second thing is, that the floatConverter should also use the numbers parser
to convert user inputs on a german page with xxx,xx to xxx.xx ?

Kind regards
carsten

Carsten, is this still recent? A couple of things changed anyways in the meantime...
