TYPO3.Flow - Bug # 37377

Status:	Resolved	**Priority:**	Must have
Author:	Aske Ertmann	**Category:**	Http
Created:	2012-05-21	**Assigned To:**	
Updated:	2012-06-18	**Due date:**	

PHP Version:	5.3
Has patch:	No
Complexity:	
Affected Flow version:	Git master
Subject:	Internal Request Engine needs to clear security context

Description

In order to get the security tokens matching the new request created in the internal request engine, the security context should be cleared using the "clearContext" method. This means that the tokens will be matched with the configuration from the routing based on the new request and not the parent request.

This breaks
"TYPO3\TYPO3\Tests\Functional\Controller\Backend\BackendControllerSecurityTest::indexActionIsDeniedForEverybody", because it throws an uncaught exception in the AuthenticationProviderManager, since no tokens are available when trying to authenticate. The reason why there aren't any tokens is, that the tokens are separated active/inactive when initializing the security context. When clearing the context, the separate method is called again with the correct controller object names allowing request pattern matching.

Revision f67078cb - 2012-06-15 21:04 - Aske Ertmann

[BUGFIX] Internal Request Engine needs to clear security context

In order to get the security tokens matching the new request created
in the internal request engine, the security context should be cleared
using the "clearContext" method. This means that the tokens will be
matched with the configuration from the routing based on the new request
and not the parent request.

This patch also contains a small enhancement which adds two additional
headers to the virtual browser's response containing the code and message
of a possible exception.
