

Core - Feature # 37412

Epic # 55575 (Accepted): Streamline JavaScript Code in the TYPO3 Backend

Status:	Closed	Priority:	Should have
Author:	Kay Strobach	Category:	Backend API
Created:	2012-05-23	Assigned To:	
Updated:	2015-01-26	Due date:	
PHP Version:			
Complexity:	medium		
Sprint Focus:			
Subject:	Move all JavaScript Frameworks to seperate extensions		
Description	<p>This would make it possible to see, which extensions depend on which framework, and they could appear in the credits / about page.</p> <p>Some functions need to be adjusted (e.g. in pagerenderer loadExtJS ...)</p> <p>JS Framework should be registered in a Framework registry (either as file, or with a class, which "calculates" the files needed, and though could be loaded with a call like:</p> <pre>\$pageRender->loadFramework('name', \$optionsArray);</pre> <p>So currently we would have the following extensions:</p> <ul style="list-style-type: none">- jQuery- extjs- prototypeScriptaculous- ...
