Have you cleared typo3-cache?

#### #2 - 2012-05-23 09:27 - Kai Kretschmann

Yes I did, with no difference.

But I found the guilty part, for anyone with the same symptom:

I restarted the apache process to clean up the opcode cache xcache and now it works. I normally restart the apache when upgrading typo3 versions, it was never needed when updating extensions. No idea what made it so special this time.

Sorry, ticket can be closed als category error-sitting-in-front-of-screen :-)

For all "Googlers"

I had the same problem - clearing caches from the Backend did not solve the problem.  
Deleting all temp\_CACHED\_\* files in /typo3conf/ solved the issue.

Same problem here after updating to v2.3.4 and TYPO 4.7. Manual clean up as Henrik mentioned did not work for me. BE module is not usable atm.

This problem seems similar to this core bug #20351

**#6 - 2012-08-03 22:24 - Anonymous**

Fixed it in 2.3.5

If the Problem persists: removing and reinstalling did the trick for me.
