TYPO3.Flow - Feature # 37584

Status:	Resolved	**Priority:**	Should have
Author:	Robert Lemke	**Category:**	Http
Created:	2012-05-29	**Assigned To:**	Robert Lemke
Updated:	2012-05-30	**Due date:**	
PHP Version:	5.3		
Has patch:	No		
Complexity:	medium		
Subject:	Reliable getClientIpAddress() method		
Description			

We need a reliable way to determine the user's IP address - even if he was passed through several proxies or if some other webserver than Apache was used.

Associated revisions

Revision 66bcdf54 - 2012-05-30 12:00 - Robert Lemke

[FEATURE] Provide way to determine client IP address

This adds a method getClientIpAddress() to the HTTP Request
class. It considers various kinds of environment variables
which are present when using proxies or certain server setups
for determining the actual client IP address.

Change-Id: I906efb9ae826ab4f4286be862ef8853105c27ae2
Resolves: #37584
Releases: 1.1, 1.2

Revision 744c7593 - 2012-05-30 14:15 - Robert Lemke

[BUGFIX] Fix IP address validation

The IP address validation done with filter_var() worked
on the development machine running PHP 5.3.12, however,
it failed on the integration server running PHP 5.3.5.
Apparently, the filter_var options for FILTER_VALIDATE_IP
behave differently in these versions.

This patch removes the validation for IPv4 / IPv6 addresses
because they didn't make sense anyway.

In that regard: hooray for PHP behavior changes. They actually
exploit bad application code. Sometimes.
