TYPO3.Flow - Feature # 37727

Status:	Resolved	**Priority:**	Could have
Author:	Christian Jul Jensen	**Category:**	Package
Created:	2012-06-04	**Assigned To:**	Christian Jul Jensen
Updated:	2012-09-25	**Due date:**	
PHP Version:			
Has patch:	No		
Complexity:	easy		
Subject:	Make Package.php optional		
Description			

Currently the required Package.php file is the only thing that differentiates native from non-native psr-0 compatible components (assuming packagestate is configured correctly).

Making the file optional and using it only if present, would simplify the packagemanager so there would be no need to have special handling of non-native components.

+1, definitely. If the Package class is needed however for further processing (what I assume), the class maybe could be "generated" on the fly maybe (at least with eval('class Foo...')), fed with information from the Meta XML.
