Updated:	2012-09-16	Due date:	
TYPO3 Version:	6.0		
PHP Version:	5.3		
Complexity:	easy		
Is Regression:			
Sprint Focus:			
Subject:	Admin has no rights to update a file		
Description			
<p>Hello Core-Team,</p> <p>I just have installed TYPO3 6.0 for testing FAL. There are no problems with creating files and folders but I can't modify the files content. I don't have permissions to edit this file.</p> <p>I have searched a very long time because FAL is pretty hugh. I found out that you define some default permissions for BE-Users. It's an Array containing an element called "editFile", but it will be checked against "updateFile". So please update your code to "editFile", or change the element within the array to "updateFile".</p> <p>For now I have added following line to BE-Userrecords TSconfig:</p> <pre>permissions.file.storage.1.updateFile = 1</pre> <p>It doesn't work, because the returning value of getTSconfig is an Array containing always to elements "value" and "properties". This is what you do:</p> <pre>\$storageFilePermissions = \$this->getTSConfig('permissions.file.storage.' . \$storageObject->getUid());</pre> <p>it should be:</p> <pre>\$tsConfigPath = \$this->getTSConfig('permissions.file.storage.' . \$storageObject->getUid()); \$storageFilePermissions = \$tsConfigPath['properties'];</pre> <p>Now the both arrays are merged correctly.</p> <p>Stefan</p>

Revision cfd10726 - 2012-09-16 16:02 - Andreas Wolf

[BUGFIX] Files contents cannot be changed

Setting file contents failed for two reasons:

- a) The permissions were incorrectly read from TSconfig and
- b) We used a new "update" permission that was not present in the default configuration, so without manually setting it, a file could never be updated, even by admins.

This commit changes the "update" permission back to "edit", which was also used in the pre-FAL era.
