

TYPO3.Flow - Bug # 37815

Status:	Closed	Priority:	Must have
Author:	Soren Malling	Category:	Persistence
Created:	2012-06-07	Assigned To:	Karsten Dambekalns
Updated:	2012-06-28	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: FLOW3 1.1.0 beta 2			
Subject:	Object are not persisted		
Description			
With the following injected repository			
<pre>/** * Team repository * * @var \Familiefejden\Domain\Repository\TeamRepository * @FLOW3\Inject */ protected \$teamRepository;</pre>			
and calling the function			
<pre>\$this->teamRepository->add(\$newTeam);</pre>			
i expect to have my \$newTeam (a valid!) object persisted, but nothing is persisted. I get forward to my next action (\$this->forward(..)) with no exceptions.			
Query log remains empty.			
./flow3 doctrine:update commands works perfectly and tables are created

History

#1 - 2012-06-07 15:01 - Soren Malling

ChristianM told me on IRC, that running ->persistAll() persists the values - but nothing is persisted if not running this command

#2 - 2012-06-07 17:02 - Soren Malling

Tried to debug the issue and added some systemlogger->log call and all of a sudden (after rebuilding proxy classes - did a flow3:cache:flush --force) the injected repository was able to persist (without running persistAll)

#3 - 2012-06-28 10:37 - Karsten Dambekalns

- *Project changed from TYPO3 Flow Base Distribution to TYPO3.Flow*
- *Status changed from New to Accepted*
- *Assigned To set to Karsten Dambekalns*

#4 - 2012-06-28 10:38 - Karsten Dambekalns

- *Category set to Persistence*
- *Status changed from Accepted to Closed*
- *Target version set to 1.1*
- *% Done changed from 0 to 100*
- *Has patch set to No*

Persistence works fine, judging from your description (it worked all of a sudden) I guess you fell victim to #37574...
