#### Revision 8378b191 - 2013-01-11 17:18 - Marc Neuhaus

[FEATURE] Allow custom custom configuration files in ConfigurationManager

Using the added methods it is possible to register new "types" of configuration. The set of processing types remains constant, but one can now e.g. register "Assets" as configuration type and use the "Settings" processing rule for that. This way it is possible to move settings for assets into a dedicated file, "Assets.yaml".

The change adds

- resolveConfigurationProcessingType() method
- registerConfigurationType() method
- 2 tests to add a new ConfigurationType
- emitConfigurationManagerReady() to register new ConfigurationTypes during boot

#### Revision fae1b9d9 - 2013-04-09 09:55 - Karsten Dambekalns

[FEATURE] Allow split configuration sources

With this change it is possible to allow split configuration sources when defining a custom configuration type. This allows to use multiple YAML for a type (when using the bundled YamlSource), which will be merged together.

## Revision fb2fc011 - 2014-03-26 16:44 - Aske Ertmann

[FEATURE] Split configuration sources include non-split default

This change changes the behavior of split configuration sources to include the default non-prefixed source as a fallback for increased flexibility, allowing some packages to have split sources and others to have a single source.

Also a check in the has method is made more strict.
