| <b>Subject:</b>   | Uri respects query and fragment party only when path is present |                     |              |
| <b>Description</b>  |   |                     |              |
| <p>With the current implementation, the query and fragment parts are only added to Uri's string representation if the path is set. This means concretely, if</p> <p>http://www.example.org?q=foo</p> <p>is set, the query is omitted because the path is empty / not set.</p> <p>As of <a href="http://tools.ietf.org/html/rfc3986#section-3">http://tools.ietf.org/html/rfc3986#section-3</a> and <a href="http://tools.ietf.org/html/rfc3986#section-5.3">http://tools.ietf.org/html/rfc3986#section-5.3</a>, for example, the query and fragment may be present without the path part.</p> |   |                     |              |
