PHP Version:	
Has patch:	
Complexity:	
Affected Flow version:	
Subject:	ValidatorResolver doesn't accept custom validator classes as validator name
Description	

When trying to implement a new Validator for URLs I stumbled upon a problem in the ValidatorResolver: it is currently not possible to add custom validators (not based on the model) e.g. for an E-Mail or URL. It should be possible to add a class name, but the Regexp doesn't allow for backslashes in the pattern.

Revision 35e43ea0 - 2009-06-29 19:56 - Christopher Hlubek

[FIX] FLOW3 (Validation): ValidatorResolver now accepts namespaced class names in validator annotations. This enables custom validator classes and fixes #3801
