

TYPO3.Flow - Bug # 38172

Status:	Resolved	Priority:	Should have
Author:	Bastian Waidelich	Category:	MVC - Routing
Created:	2012-06-19	Assigned To:	Bastian Waidelich
Updated:	2012-06-20	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: Git 1.1			
Subject:	Routing cache only works for one request		
Description			
<p>Currently the routing uses a TransientMemory Cache Backend by default. Besides, objects in the routing values are converted to hashes using <code>spl_object_has()</code> - which generates a new hash every request.</p> <p>Instead a more persistent cache backend should be used and objects should be converted to their identifiers using the <code>PersistenceManager</code>.</p> <p>Note: The cache needs to be flushed when ever a <code>Routes.yaml</code> file has been changed an for functional tests</p>

[BUGFIX] Routing cache only works for one request

Currently the routing uses a TransientMemory cache backend by default. Besides, objects in the routing values are converted to hashes using `spl_object_hash()` - which generates a new hash for every request.

This change configures the `RouterCachingAspect` to use a `SimpleFile` cache backend and adjusts the aspect to use the persistence manager in order to convert objects to their identifiers before creating cache entries.

This also adds a signal to the `FunctionalTestCase` base class that flushes the routing caches on teardown.

Furthermore this adds two convenience methods `getLastMatchedRoute()` and `getLastResolvedRoute()` to the router which should make debugging and testing easier.

[BUGFIX] Log route values if a route can't be resolved

This re-introduces logging if a route could not be resolved.
This behaviour was lost with I9605731f78cb1be9b0fb5c439d7149a676b6ccb7
