

flow3.typo3.org - Bug # 3849

Status:	Closed	Priority:	Must have
Author:	Peter Bowyer	Category:	Content
Created:	2009-07-08	Assigned To:	Robert Lemke
Updated:	2011-09-16	Due date:	
Subject:	Errors in Flow3 Comparison chart		
Description			
<p>Hi,</p> <p>The following info is incorrect about Symfony:</p> <ul style="list-style-type: none">- It has a package repository (http://www.symfony-project.org/plugins/) which is also accessible as a PEAR channel from the command-line tool- Dependency Injection is coming in Symfony 2.0, and the code has been released to the community already.- Symfony is developed using Continuous Integration (http://ci.symfony-project.org/) <p>My understanding is Symfony uses "Persistence (Domain Model)" not "Persistence (Active Record)".</p> <p>I don't know what you mean by "Object Lifecycle Management" - I thought this was something PHP took care of internally :)</p> <p>Finally, I have no idea what "DDD Optimized Layer Architecture" is - may be worth explaining?</p>

Hi Peter, sorry for the late response.

I am planning to update the whole framework comparison page for the next alpha release of FLOW3 (ie. on August 1st). I hope to find a more meaningful way to compare each solution because a simple check mark doesn't really tell the whole story.

I'll let you know as soon as I updated the page.
