TYPO3.TypoScript - Feature # 38630

Feature # 38629 (Resolved): Make TypoScript usable outside the context of TYPO3 / Nodes, but also for building extensible FLOW3 applications

Status:	Resolved	**Priority:**	Should have

Subject:	Implement TypoScriptView which can be used as replacement of Fluid TemplateView in standard FLOW3 applications		
Description			

TypoScript should deliver a standard TypoScriptView which can be used outside of the TYPO3 Context, i.e. for normal FLOW3 applications.

I envision it works as follows:

  - The user activates it by setting $defaultViewObjectName to the TypoScriptView
  - The TypoScriptView loads all TypoScript defined in Resources/Private/TypoScript of the currently-requested package, plus additional extension templates as configured f.e. through Settings.yaml
  - Then it checks for the class path of the Controller in TypoScript, i.e. if the Controller TYPO3\Blog\Controller\PostController with action show is triggered, the path TYPO3.Blog.PostController.show needs to contain a TypoScript object which is the base for rendering
  - If such a TypoScript object is found, it is used for rendering
  - If not, we fall back to a fallbackView which is, by default, the standard Fluid TemplateView
